Continuing Education Course in Endodontics
Dr Gary Cheung
16 November 2007
Lecture Course, PPDH Lecture Theatre I, 1:00pm – 5:00pm

Problem solving in endodontic therapy

Endodontic treatment can be highly demanding on manual skills and dexterity. Problems during treatment may arise due to anatomical, technical, and iatrogenic reasons. This workshop aims to provide a description of the solution to some commonly encountered problems, including the localisation and negotiation of fine (and extra) root canals, prevention and management of instrument breakages, perforations, and the immature root apex. Demonstrations will be given whenever possible.
